TITLE OF THE EXPERIMENT :

To create a JavaScript-based student profile application using classes, objects, DOM manipulation, dynamic HTML elements, and event handling.

DESCRIPTION:

The Student Profile application is a simple web application developed using HTML, CSS, and JavaScript. It uses a JavaScript Student class with properties such as Name, Roll Number, Department, and CGPA. The user enters the student details through input fields, and when the Display Student Profile button is clicked, JavaScript collects the entered values using DOM methods. A Student object is then created using the class constructor. The program dynamically creates HTML elements using createElement(), adds student information using textContent, and displays the elements on the webpage using appendChild(). The addEventListener() method is used to handle the button-click event. Basic CSS is applied to make the dynamically generated student profile clear and attractive. Thus, the program demonstrates JavaScript classes and objects, DOM selection, dynamic HTML element creation, content modification, DOM manipulation, and event handling.

PROGRAM:

index.html

```
<!DOCTYPE html>

<html>

<head>

    <title>My To-Do List</title>

    <link rel="stylesheet" href="style.css">

</head>

<body>

    <div class="container">

        <h1>My To-Do List</h1>

        <input type="text" id="taskInput" placeholder="Enter a task">

        <button id="addTask">Add Task</button>

        <ul id="taskList"></ul>
```

```
    <p id="emptyMessage">No tasks available.</p>
  </div>
```

```
    <script src="script.js"></script>
  </body>
</html>
```

style.css

```
body {
  font-family: Arial, sans-serif;
  background-color: #f2f2f2;
  text-align: center;
  padding: 40px;
}
```

```
.container {
  width: 500px;
  margin: auto;
  background-color: white;
  padding: 25px;
  border-radius: 10px;
  box-shadow: 0 0 10px gray;
}
```

```
h1 {
  margin-bottom: 20px;
}
```

```
#taskInput {
  width: 300px;
  padding: 10px;
  font-size: 16px;
}
```

```
#addTask {  
    padding: 10px 15px;  
    cursor: pointer;  
}
```

```
ul {  
    list-style: none;  
    padding: 0;  
}
```

```
li {  
    display: flex;  
    align-items: center;  
    justify-content: space-between;  
    margin: 10px 0;  
    padding: 10px;  
    background-color: #eeeeee;  
    border-radius: 5px;  
}
```

```
.taskText {  
    flex: 1;  
    text-align: left;  
}
```

```
.completed {  
    text-decoration: line-through;  
    color: gray;  
}
```

```
button {  
    margin-left: 5px;  
    padding: 7px 10px;  
    cursor: pointer;
```

```
}
```

Script.js

```
const taskInput = document.getElementById("taskInput");
```

```
const addTaskButton = document.getElementById("addTask");
```

```
const taskList = document.getElementById("taskList");
```

```
const emptyMessage = document.getElementById("emptyMessage");
```

```
addTaskButton.addEventListener("click", function () {
```

```
    const task = taskInput.value.trim();
```

```
    if (task === "") {
```

```
        return;
```

```
    }
```

```
    const listItem = document.createElement("li");
```

```
    const taskText = document.createElement("span");
```

```
    taskText.textContent = task;
```

```
    taskText.className = "taskText";
```

```
    const completeButton = document.createElement("button");
```

```
    completeButton.textContent = "Complete";
```

```
    completeButton.addEventListener("click", function () {
```

```
        taskText.classList.toggle("completed");
```

```
        if (taskText.classList.contains("completed")) {
```

```
            completeButton.textContent = "Completed";
```

```
        } else {
```

```
            completeButton.textContent = "Complete";
```

```
        }
```

```
    });
```

```
const deleteButton = document.createElement("button");
deleteButton.textContent = "Delete";

deleteButton.addEventListener("click", function () {
    listItem.remove();
    updateEmptyMessage();
});

listItem.appendChild(taskText);
listItem.appendChild(completeButton);
listItem.appendChild(deleteButton);

taskList.appendChild(listItem);

taskInput.value = "";

updateEmptyMessage();
});

function updateEmptyMessage() {
    if (taskList.children.length === 0) {
        emptyMessage.style.display = "block";
    } else {
        emptyMessage.style.display = "none";
    }
}

updateEmptyMessage();
```

OUTPUT:

My To-Do List

Add Task

- writing

CompletedDelete
- read

CompleteDelete
